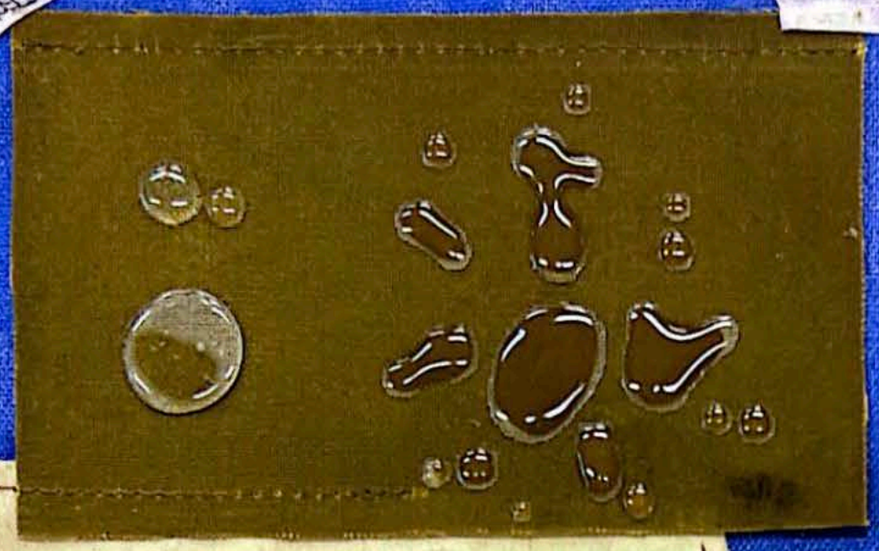
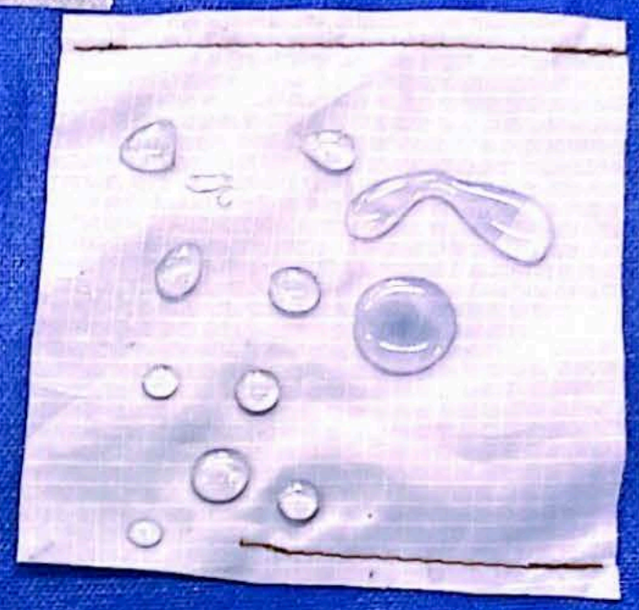
Wax Fabric with resin droplets

Wheel effect style





The resin effect idea came up after I sprayed some water on my waterproof fabric to see what was going to happen. The water layed on top of the fabric, was an effect I really liked and I thought to myself that I don't to go mainstream, by doing something "new". After few samples and experiments, we came to a conclusion that resin was going to be the best way to recreate my thoughts after pouring the water on the fabric. Here are some successfull samples.

Still have air bubble and fall
